Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_40:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Nephila clavipes dragline silk is a two-protein fiber.",

J. BAOL Chem. 267:19324 (1992).

-I- FUNCTION: Spiders major ampullate silk possesses unique characteristics of strength and elasticity. Fibroin consists of pseudocristaline regions of antiparallel beta-sheet interspersed with elastic amorphous segments.

-I- SUBUNIT: MAJOR SUBUNIT, WITH SPIDROIN 1, OF THE DRAGLINE SILK.

-I- SUBURIT: MAJOR SUBUNIT, WITH SPIDROIN 1, OF THE DRAGLINE SILK.

-I- SUBCELLULAR LOCATION: Extracellular.

-I- DOWAIN: Highly repetitive protein characterized by regions of polyalanine and glycine-rich repeating units.

-I- SIMILARITY: BELONGS TO THE SILK FIBROIN FAMILY.
                                                                                                                                                                                                                                                                                                      Gaps

Kisiclow P., Miazek A.;
Submitted (MAR-1997) to the EMBL/GenBank/DDBJ databases.
-:- FUNCTION: UNWINDS DOUBLE-STRANDED DNA AND RNA IN A 3' TO 5'
DIRECTION. GENERATES MULTIPLE SECONDARY STRUCTURES THAT INFLUENCE
RNA-BINDING PROTEINS. MAY PLAY A ROLE IN X-LINKED GENE EXPRESSION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          440 GFAPSGNGNGYGPGGTGFIPIPGGNGFSPGVGGAGGGGPIIT---GLTILNQTIDI 496

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
